

Hero Biobased UltraSolve

Rinsible methyl ester based cleaner degreaser

Hero Biobased UltraSolve easily removes oil and grease from metal surfaces. With high solvency power, UltraSolve removes resins and polymers with ease. UltraSolve is 250% stronger than mineral spirits with a Kauri-Butanol (Kb) value of 75 vs. 30 for mineral spirits.

“It is amazing! It is by far the best cleaning agent we’ve ever used with such a low environmental impact in over 45 years in business!!” says an UltraSolve customer in the Printing Industry.

UltraSolve can be wiped dry, wet wiped or rinsed off with water. Or leave it on for a corrosion resistant barrier.

Ultra Solve is non-polluting and safe. With only 1 g/l VOCs, UltraSolve has a “No-VOC” rating. And with a FlashPoint of over 350°F, UltraSolve eliminates the health-risks associated with petroleum-based solvents. UltraSolve helps to create a clean indoor air environment. Consumers are becoming increasingly concerned about indoor air pollution as studies have shown this pollution can be responsible for shortened life spans.

UltraSolve exceeds the USDA BioPreferred Biobased specification and qualifies for Federal biobased buying requirements.

Use UltraSolve to clean masonry walls, metal equipment and engines. Clean the outside of barbeque grills or anywhere where carbon buildup is an issue. Use UltraSolve to clean grease and grime from automobiles and trucks. UltraSolve loosens rusted parts with ease and can free stuck mechanisms and keep parts running smoothly.

UltraSolve does not harm vegetation. With biobased and natural ingredients, accidental overspray on vegetation will even act like a fertilizer to vegetation.
